

Business Intelligence

BUSINESS INTELLIGENCE is an easy-to-understand, visually intuitive graphical representation of key business performance metrics, easily accessed by users from a single screen. Color coded bar charts, graphs and other visual depictions of data give users a fast look at key metrics important to their functional area. By making mission-critical metrics available to the entire enterprise – in real-time – companies have a better chance to take action about decisions for a more competitive business process. They provide a visible, real-time measurement to enable a feedback loop that encourages functional areas to focus on the tasks, accomplishments and targets that organization has chosen to highlight.
